개념 설명

일반 삼각형의 변의 길이

그림

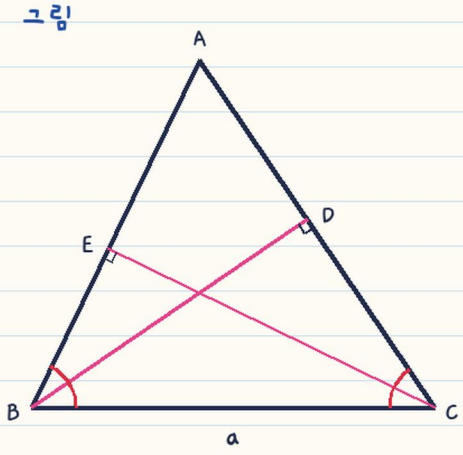

$\overline{AH} = c \sin B$, $\overline{BH} = c \cos B$

$\overline{HC} = a - c \cos B$

$\overline{AC}^2 = \overline{AH}^2 + \overline{HC}^2$

(1) $\overline{AC} = \sqrt{(c \sin B)^2 + (a - c \cos B)^2}$

그림

$\overline{BD} = a \sin C = \overline{AB} \sin A \rightarrow \overline{AB} = \dfrac{a \sin C}{\sin A}$

$\overline{CE} = a \sin B = \overline{AC} \sin A \rightarrow \overline{AC} = \dfrac{a \sin B}{\sin A}$

(2) $\angle A = 180° - (\angle B + \angle C)$
