개념 설명

삼각형의 넓이

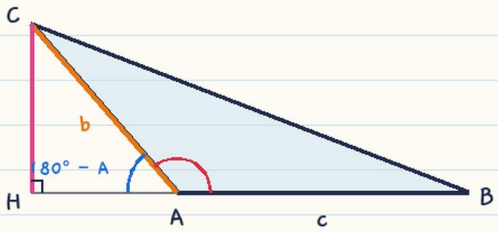

(1) ∠A가 예각

$\overline{CH} = b \sin A$

$$S = \frac{1}{2} \times c \times b \sin A = \frac{1}{2}bc \sin A$$

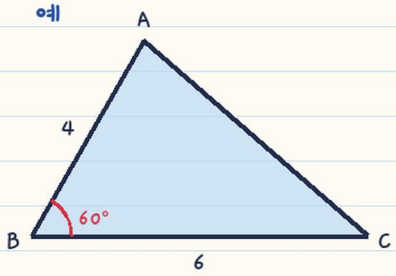

(2) ∠A가 둔각

$\overline{CH} = b \sin(180° - A)$

$$S = \frac{1}{2}bc \sin(180° - A)$$

예

$$\triangle ABC = \frac{1}{2} \times 4 \times 6 \times \sin 60° = \frac{1}{2} \times 4 \times 6 \times \frac{\sqrt{3}}{2} = 6\sqrt{3}$$
